

3) Дальше переключаемся на коллекцию и на вкладке Variables param, заполнилось значение Олег

4) Дальше создаем еще один запрос Get, где передеём параметр param. И на вкалдке pre-request пишем нужный скрипт, который добавит нашу фамилию Solunin

GET v https://postman-echo.com/get?param([param])

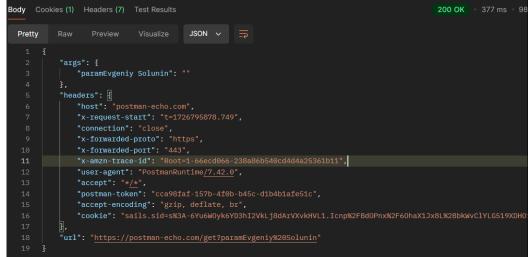

Params \* Authorization Headers (7) Body Scripts \* Settings

Pre-request \* var firstName = pm.collectionVariables.get("param"); pm.collectionVariables.set("param", firstName+" Solunin");

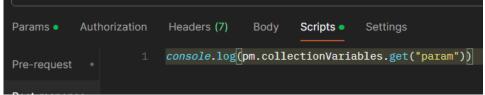

Post-response

5) Нажимаем Send и получаем

(См. Листинг 2)

6) Далее на вкладке Test(она же post-response) запишем строчку которая выведет в консоль постмана значение нашего имени и фамилии.

7) Дальше нажимаем на отправить и получаем(См. Листинг 3)

                 Мы познакомились с pre-request script'ами. Изучили их
Результат
                 возможности, и смогли добавить наши переменные которые
                 являются нашим именем и фамилией. Так же продолжаем
                 работать с вкладкой Test(она же post-response).
